COMPANY

PROFILE

COMPANY SUMMARY

Jobfellas Projects (Pty) Ltd is a specialist civil engineering contractor focused on the provision of **bituminous surfacing, road construction, and pavement preservation solutions**. We are a reliable partner in delivering durable, high-quality road networks for both public and private sector clients across South Africa. Our operations are grounded in technical precision and adherence to local infrastructure standards.

KEY METRIC AREA	ASPHALT / ROAD SURFACING FOCUS
Main Areas of Activity	Hot-Mix Asphalt (HMA) Paving , Road Rehabilitation, Pavement Preservation (Reseals, Slurry Seals), and Specialist Bituminous Surfacing.
Primary Markets	National (SANRAL), Provincial Roads , Metropolitan Councils , Commercial & Industrial Hardstands.
Core Product	Performance-Grade Asphalt Mixes, Polymer Modified Bitumen (PMB), and proprietary Slurry Seal Emulsions.

Grade 6CE
Grade 5SB
Grade 4SK
Grade 1GB
Grade 1ME

MISSION

To provide innovative and sustainable asphalt surfacing solutions, ensuring client project success through adherence to quality specifications and superior in-situ construction execution.

VISION

To be the leading and most trusted name in Southern Africa for robust, cost-effective pavement technology and road surface delivery.

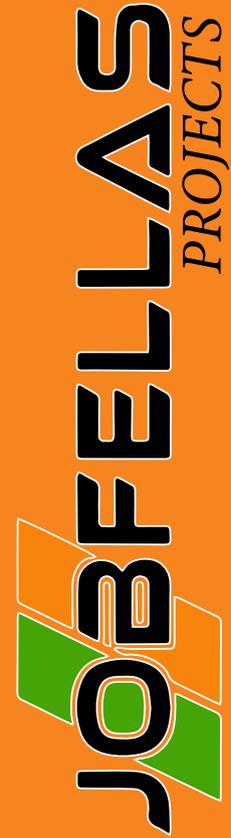

VALUES

Quality First: Striving for optimal compaction and surface finish on every layer work.

Pavement Integrity: Commitment to technical compliance with all COTO/SANRAL specifications.

Safety in Surfacing: Prioritising the safety of employees and the public during all hot-mix operations.

PRODUCTS & SERVICES

BITUMINOUS SURFACING

Bituminous surfacing for heavy-duty and specialized areas such as airports, industrial sites, and high-traffic roads, ensuring superior strength, durability, and long-term performance.

ROAD CONSTRUCTION & REHABILITATION

We provide complete road construction and rehabilitation services, including base preparation, surfacing, and structural strengthening, restoring safety, durability, and ride quality.

PAVEMENT PRESERVATION (RESEALS,

Our reseal and slurry seal solutions protect and renew road surfaces, improving texture, sealing cracks, and preventing water damage for long-term durability.

JOBFELLAS
PROJECTS

The logo features the word "JOBFELLAS" in a bold, black, sans-serif font with a white outline. The letter "O" is stylized with a green and white geometric pattern. Below it, the word "PROJECTS" is written in a smaller, black, sans-serif font.

OUR BUSINESS MODEL AND PAVEMENT VALUE CHAIN

Our integrated operating model manages the full asphalt supply chain to ensure quality control, cost efficiency, and timely project delivery.

STAGE IN VALUE CHAIN

OUR BUSINESS MODEL AND PAVEMENT VALUE CHAIN

SOURCING & MATERIALS

Strategic procurement of aggregates, sand, and bitumen (binder) to ensure consistent, high-grade material supply. Utilisation of Recycled Asphalt Pavement (RAP) where feasible.

ASPHALT PRODUCTION

Managing production schedules at dedicated Asphalt Batching Plants (or mobile plants) to deliver **Hot-Mix Asphalt (HMA)** or Warm-Mix Asphalt (WMA) to site at optimal laying temperatures.

EXECUTION & APPLICATION

Precise laying of the surface layer using modern pavers, followed by sequential roller compaction to achieve design specifications for ride quality and durability.

MAINTENANCE & AFTERCARE

Offering comprehensive Pavement Preservation contracts (e.g., Chip and Spray reseals, crack filling) to protect the client's investment and extend the road's service life.

SPECIALISED MANUFACTURED AND TECHNICAL CAPACITY

Our capacity is defined by our state-of-the-art plant and our technical ability to handle complex pavement designs and construction methods.

SUB-HEADING	DETAILED ASPHALT CAPACITY STATEMENT
Core Plant & Equipment	Fully-owned fleet including advanced Asphalt Pavers, dedicated Compaction Plant (tandem and pneumatic rollers), self-propelled Bitumen Sprayers, and Road Milling Machines for rehabilitation.
Technical Fleet Utilisation	Use of automation and sensor technology to maintain consistent leveling course and layer thickness tolerances during paving.
Quality & Assurance (QA/QC)	Mobile site laboratory setup for on-the-spot testing of asphalt temperature, volumetric properties, and final pavement density (using nuclear gauges) as per Committee of Transport Officials (COTO) standards.
Human Capital & Expertise	A core team of certified Asphalt Technologists, experienced Paver Operators, and COTO-compliant supervisors focused on achieving optimal air voids and skid resistance.

STAKEHOLDER ENGAGEMENT AND ROAD NETWORK FOCUS

We manage material issues related to client needs, supply reliability, and project compliance within the South African civil infrastructure environment.

STAKEHOLDER GROUP	PRIMARY ENGAGEMENT FOCUS (ASPHALT INDUSTRY)	MATERIAL MATTER TO MANAGE
Government Clients (SANRAL/ Municipalities)	Demonstrating compliance with public procurement requirements, BEE targets, and delivering durable infrastructure (Road Rehabilitation contracts).	Achieving required CIDB Rating and ensuring predictable material supply for large volume contracts.
Suppliers & Partners (Bitumen/Aggregate Quarries)	Building strategic relationships for the consistent and ethical sourcing of binder and specified road stone (aggregates) that meet pavement design specifications.	Mitigating price volatility and ensuring the quality and chemistry of the bituminous emulsion remains stable.
Employees & Contractors	Skills development in specialised fields (Chip and Spray application, Slurry Seal mixing) and on-site safety for hot works and heavy plant.	Managing exposure to hot asphalt and heavy plant machinery; complying with OHS Act requirements during hot-mix operations.

GOVERNANCE, SAFETY AND PAVEMENT SUSTAINABILITY

Our commitment to governance and sustainability is key to long-term value creation and risk mitigation in the construction sector.

FOCUS AREA	COMMITMENT AND RISK MITIGATION IN ASPHALT SURFACING
Occupational Health & Safety (OHS)	Implemented a mandatory “No-Touch” policy for hot asphalt material handling. Continuous training on plant operation and hazard identification (e.g., steam, high temperatures) during the paving process.
B-BBEE Compliance	Dedicated strategies to ensure high empowerment recognition, a critical pre-qualification criterion for public sector road tenders, focusing on developing skilled local personnel.
Environmental Responsibility	Promotion of Warm-Mix Asphalt (WMA) to reduce fuel consumption and CO2 emissions. Proactive management of material run-off and dust suppression on base layer and sub-base construction areas.
Material Risks	Pavement Design Failure: Mitigated by mandatory independent sign-off on mix designs and adherence to all layerworks specifications.
Focus Area	Equipment Breakdown: Managed via a scheduled maintenance plan to ensure high uptime of specialist paving equipment.
